The Cover Letter

To: **KPN**
For the job role: **Senior Software Engineer (Golang)**

Hello,

I'm applying for your job vacancy because I feel confident in being a good candidate for your position based on the requirements I read on your job specification. I have some hands on Go and I'm really eager to learn it. Having deep experience with C/C++ and Java will help me learn Go on a faster pace. Besides the mandatory requirements, I have the skills which are considered a plus. They are CI/CD, DevOps, Agile/Scrum, some hands on Go, and experience with MongoDB. I'm looking forward to have your response.

Best regards,
Kamran
