Application for the Spiele-Software-Tester (m/w/x) position in Vienna

Dear Hiring Team,

I am applying for the Game Software Tester position at Rabcat. I live in Vienna, I am an EU citizen (Dutch), and for the past two years I have been a Software Test Engineer at DeKrypt BV, testing a trading and settlement platform in a Scrum team. Finding the bug that nobody expected is the part of the work I enjoy most, and HTML5 games where every spin, animation, and payout has to be right in every browser are exactly the kind of product where that attention to detail matters.

At DeKrypt BV I defined the test scenarios for each release and wrote both manual and automated test cases, running the manual and exploratory tests myself and contributing to the automated suites in Cypress (JavaScript) and pytest. Browser testing of the web trading app across Chrome, Firefox, Safari, and Edge on Windows and macOS was part of every release. I wrote detailed bug reports in Jira with clear reproduction steps, followed each defect through its lifecycle with the developers until the fix was verified, and accompanied the product before and after each rollout. I also regularly brought suggestions to the team on how to improve our tests and the QA process, several of which we adopted.

I know the software development process from both sides. Before moving into testing I worked as a developer in JavaScript, Java, and C#/.NET, so TypeScript is familiar ground and I can discuss root causes with developers rather than only symptoms. I hold a bachelor's degree in IT Engineering, I am preparing for the ISTQB Foundation Level exam, I am fluent in English, and I am actively learning German. Online gambling games are a new domain for me, and I would bring the same curiosity and quality awareness to them that I bring to a trading platform.

I would welcome the opportunity to discuss the role. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
