Application for the Quality Assurance Engineer position in Vienna

Dear Hiring Team,

I am applying for the Quality Assurance Engineer position on your cloud-based work management product. I live in Vienna, I am an EU citizen (Dutch), and for the past two years I have been a Software Test Engineer at DeKrypt BV, contributing to quality from planning to release in a Scrum team on a trading and settlement platform. Your posting says you welcome candidates who do not meet every requirement, and I am taking you at your word: I have two years of QA experience rather than four, and the rest of the profile fits closely.

At DeKrypt BV I built and maintained the Cypress end-to-end suite for the web application in JavaScript, automated the REST API tests with Python and pytest, and ran both in CI before every merge. Alongside the automation I performed functional, regression, and exploratory testing on every feature, analysed defects to their root cause using logs, SQL queries, browser developer tools, and API responses, and worked with the developers until they were resolved. I took part in feature planning and refinement so that quality was discussed before the code was written, and I used Claude daily to draft test cases and speed up test-script writing, which your posting describes as AI-powered testing workflows.

Before testing I worked as a front-end developer with JavaScript and Vue.js, which is where my attention to UI consistency and usability comes from, and earlier as a backend developer in C#/.NET and Java. That background lets me read the code I test and discuss root causes with developers in their own terms. I hold a bachelor's degree in IT Engineering, I am preparing for the ISTQB Foundation Level exam, and I communicate fluently in English.

Three days a week in your Vienna office suits me well, and I would welcome the opportunity to discuss the role. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
