Application for the Quality Engineer position in Vienna (R0046895)

Dear Hiring Team,

I am applying for the Quality Engineer position on the Spectacles team in Vienna. I live in Vienna, I am an EU citizen (Dutch), and I have just over two years of industry QA experience as a Software Test Engineer at DeKrypt BV, where I tested a trading and settlement platform through its early, fast-changing stages in a Scrum team. Testing a wearable device at the prototype stage, with the product and software teams in the same office, is the kind of work I would like to do next.

At DeKrypt BV I developed, documented, and executed the test plans for each release, ran regular exploratory sessions to extend coverage beyond the scripted cases, and triaged defects in Jira with clear reproduction steps and the evidence developers needed to fix them: logs, API responses, and database state. I designed application-level and system-level test cases from the specifications, automated the API and end-to-end checks in Python and Cypress, and ran them in CI before every merge. I used Claude daily to draft test cases, speed up test-script writing, and support defect analysis, which has become a normal part of how I work.

My hardware testing experience is limited, and I say so plainly. What I bring instead is a developer background in C#/.NET, Java, and JavaScript that makes me comfortable tracing a failure through logs and code to its cause, close attention to detail, and curiosity about new technology. I hold a bachelor's degree in IT Engineering, I am preparing for the ISTQB Foundation Level exam, and I am fluent in English.

I am happy to work from the Vienna office four or more days a week and would welcome the opportunity to discuss the role. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
