Application for the Software QA Engineer (all genders) position in Vienna

Dear Hiring Team,

I am applying for the Software QA Engineer position at StreamUnlimited. I live in Vienna, I am an EU citizen (Dutch), and for the past two years I have been a Software Test Engineer at DeKrypt BV, testing a trading and settlement platform in a Scrum team. Finding bugs is the part of the work I enjoy most, and testing audio devices that ship to real customers with Google Cast, Spotify, and AirPlay on board is a step I would like to take.

At DeKrypt BV I designed, executed, and maintained the test plans for each release, reviewed and improved the existing ones as the product changed, and ran the manual and exploratory tests independently while contributing to the team's automated suites in Python and Cypress. I worked with the developers daily to identify, report, and track defects in Jira, each with clear reproduction steps, and verified the fixes. My test code went through Git merge requests with code review, and the suites ran in Linux-based CI/CD pipelines against Docker services, so the Linux command line is part of my routine.

Embedded systems are new to me, and I say so plainly. Before testing I worked as a developer in C#/.NET, Java, and JavaScript, which helps me pick up new technologies quickly and talk to developers about root causes rather than only symptoms. I hold a bachelor's degree in IT Engineering, I am preparing for the ISTQB Foundation Level exam, I am fluent in English, and I am actively learning German.

I would welcome the opportunity to discuss the role. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
