Application for the Software Test Engineer position in Vienna

Dear Hiring Team,

I am applying for the Software Test Engineer position in your Vienna infusion-systems team. I live in Vienna, I am an EU citizen (Dutch), and for the past two years I have been a Software Test Engineer at DeKrypt BV, testing a fintech trading platform in an international Scrum team. Your posting describes my daily work closely, and the chance to apply it to software that hospitals rely on is what draws me to BD.

At DeKrypt BV I wrote and maintained the Cypress regression and functional end-to-end suite for the trading web application and automated the REST API tests with Python and pytest, both running in CI/CD pipelines on Jenkins and GitHub. I ran exploratory sessions on every new feature, executed the manual test cases, and reported defects in Jira with clear reproduction steps before verifying the fixes. I worked daily with developers and product owners through sprint planning, reviews, and retrospectives.

Before testing I worked as a developer in Java, C#/.NET, and JavaScript, which lets me read the code I test and discuss root causes with developers in their own terms. Medical device software is new ground for me, and I would approach it as I did trading and settlement: by learning the specifications thoroughly and testing against them. I hold a bachelor's degree in IT Engineering, I am preparing for the ISTQB Foundation Level exam, and I am fluent in English.

I would welcome the opportunity to discuss how I can contribute to the quality of your products. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
