Application for the Test Engineer (m/w/d) position in Vienna

Dear Ms. Kanatschnig,

I am applying for the Test Engineer position in Vienna. I live in Vienna, I am an EU citizen (Dutch), and I am available to start immediately. For the past two years I have been a Software Test Engineer at DeKrypt BV on a financial trading and settlement platform, which is why the combination of software testing and financial products in your posting appeals to me directly.

The product I tested was the Agora Stock Exchange Engine, DeKrypt BV's tokenized-securities exchange built from Golang microservices in Docker on Kubernetes. I derived test cases from the requirements for each new feature, performed manual and automated testing, and verified test data and results with SQL queries against the relational database behind the services. The automated suites ran in Linux-based CI/CD pipelines, and I analysed and documented defects in Jira and tracked them to resolution with the developers and product owners.

Before testing I worked as a developer in C#/.NET and Java, which matches the languages you mention and helps me support root-cause analysis rather than only report symptoms. I have worked in Scrum teams throughout, I hold a bachelor's degree in IT Engineering, and I am preparing for the ISTQB Foundation Level exam.

I am fluent in English. My German is at A1 level and I am actively learning it, and I mention this openly so you know where I stand.

I would welcome the opportunity to talk about the role. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
