Application for the QA Engineer (Strong Junior) position

Dear Hiring Team,

I am applying for the QA Engineer position at DocFinder. I live in Vienna, I am an EU citizen (Dutch), and for the past two years I have been a Software Test Engineer at DeKrypt BV, testing a web-based trading and settlement platform in a Scrum team. Your posting reads like a description of that work, and a platform that six million patients a month depend on is one where careful testing clearly matters.

At DeKrypt BV I created and maintained the test cases, checklists, and regression suite for each feature, and ran functional, smoke, regression, cross-browser, exploratory, and release testing. I validated REST API requests, responses, and business rules with Postman and automated those checks with Python and pytest, and I built the Cypress end-to-end suite for the web application. When something failed I investigated with application logs, SQL queries against the database, browser developer tools, and the API responses, then reported the defect in Jira with reproduction steps and evidence. I took part in every Scrum ceremony and worked with the developers and product owner to pin down missing or unclear acceptance criteria before testing began.

Before testing I worked as a developer in C#/.NET, Java, and front-end JavaScript, which helps me design positive, negative, and edge-case scenarios from the way the code is likely to behave, and to discuss root causes with developers rather than only report symptoms. I hold a bachelor's degree in IT Engineering, I am preparing for the ISTQB Foundation Level exam, I am fluent in English, and I am actively learning German.

I am available for at least three days a week in the office and would welcome the opportunity to talk about the role. Thank you for considering my application.

Kind regards,
Afsaneh Sadeghnia
