- ✓ Manual, automated and API testing with Python, pytest and Postman
- ✓ Test plans, test cases, and test reports
- ✓ CI/CD pipelines on Jenkins and GitHub running test suites
- ✓ Problem solving with attention to detail
- ✓ Reliable team player and fast learner

PROFILE

Software Test Engineer with hands-on testing experience and an earlier background in software development (Java, C#/.NET and front-end work). Experienced in manual, automated and API testing with Python, pytest and Postman, writing test plans and test cases, running tests in CI/CD pipelines (Jenkins, GitHub), working with merge requests and code review, and using Jira and Confluence in Agile/Scrum teams. My development background helps me understand software from both a technical and a quality perspective and communicate clearly with developers. I enjoy learning, improving testing processes and contributing to reliable, user-friendly software.

WORK EXPERIENCE

DeKrypt BV

Software Test Engineer
June 2024 - September 2026
Amsterdam, Netherlands

- Developed and maintained automated tests using Python and pytest, including REST API tests.
- Integrated the automated test suites into CI/CD pipelines on Jenkins and GitHub so every change is tested before merge.
- Created test plans, test scenarios, test cases and test reports for new features.
- Performed manual, functional, API (Postman), integration and system testing.
- Reported and tracked defects using Jira and documented testing work in Confluence.
- Collaborated with developers in Agile/Scrum, delivering test code via merge requests and reviewing the team's code.

Self-employed

Front-End Developer
July 2021 - May 2024
Amsterdam, Netherlands

- Developed and maintained front-end components for client web projects using HTML, CSS, JavaScript and Vue.js.
- Integrated the front end with REST APIs and tested the components manually across browsers before delivery.
- Managed the work independently with clients, from requirements and estimates to delivery and bug fixes.

Ubiqum Code Academy

Junior Full Stack Java Developer (bootcamp)
January 2020 - June 2020
Amsterdam, Netherlands

- Built full-stack web applications with Java, Spring Boot, REST APIs and SQL in Agile/Scrum sprints.
- Wrote unit tests for the backend and worked through Git merge requests, reviewing teammates' code.

Tehran Institute of Technology

Software Developer (Junior Software Developer until May 2015)
October 2013 - February 2017
Tehran, Iran - relocated to Sweden in 2017, then to the Netherlands

- Developed and maintained web applications using C#/.NET, ASP.NET Web Forms, MVC & Web API, JavaScript, REST services and SQL.
- Designed and implemented REST services and the SQL Server database schemas and queries behind them.
- Tested and debugged features before release and fixed defects reported by users.

SKILLS

- **Testing:** Manual Testing - Automated Testing (Python, pytest) - API Testing - Test Planning & Case Design - Functional, Integration & System Testing
- **Tools & Process:** Defect Tracking (Jira) - Confluence - Agile / Scrum - Git / GitHub - Postman
- **Development:** Python - SQL - REST APIs

LANGUAGES

Persian, English, Dutch

EDUCATION

- **Bachelor Degree in IT Engineering**, University of Applied Science and Technology (Tehran, Iran), 2009 - 2013

CERTIFICATIONS & COURSES

- **ISTQB Certified Tester, Foundation Level**, currently studying for the exam
- **Full Stack Java Development**, Ubiqum Code Academy, 2020
- **Java Nano Degree**, Udacity
- **Advanced Java Courses**, LinkedIn Learning, 2018
- **Java 8 Essential Training**, 2015
